

NEW ENFORSYS POLICE/FIRE/INSPECTIONS INTEGRATION PRODUCTS

Enforsys Announces Two Enhancements to Improve Data Sharing Among Police, Fire and Code Enforcement

The Enforsys Building2CAD View Module for the PoliSys 4.0 CAD/RMS

The Enforsys **Building View** Module is now available for municipalities that use both: 1) our Fire Pro Inspections system with Pre-Plan; and, 2) our Police Enforsys CAD/RMS System.

The integrated Module enables police department personnel to access from within the CAD/RMS System in real-time the most up-to-date building plan and ownership information collected by the municipality's Code Enforcement Department.

See the attached sheet below to see how it works.

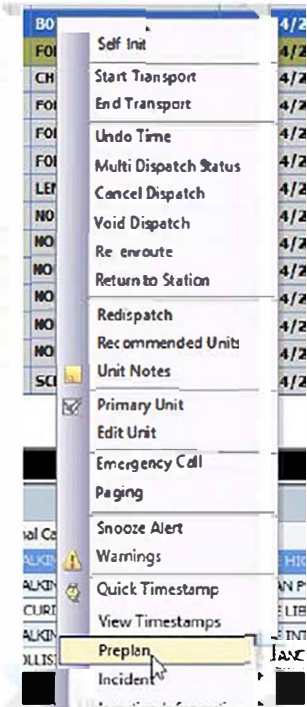

The Enforsys CAD2NFIRS Interface

The Enforsys enhanced CAD-to-RMS interfaces enables the automatic real-time transfer information from the municipal Police Customer CAD systems to the Municipal Fire Department Customer NFIRS system. The enhanced interface automatically transfers information to the associated Fire Department's Enforsys NFIRS system, information that includes Location, Call Time, Arrival Time, Clear Time, Apparatus Dispatched, and logged notes from the dispatching Enforsys CAD system.

Feel free to contact sales@enforsys.com for pricing and additional information.

Enforsys Inc. Plan2CAD Integration:

From within CAD ,
right click on the Incident
location and select Preplan:

Select the correct address from the Inspections
PrePlan address list (address redacted):

If there is building information in the Inspections PrePlan system,
they will appear in a new pop-up window:
